

TECHNICAL BRIEF

Ella + Cake Ordering System

For the EL&N London IT team review meeting

PREPARED FOR
EL&N London IT team

PREPARED BY
Click AI Agency

DATE
14 August 2026

SECTION 01

System at a glance

The Ella + Cake Ordering System is a purpose-built, custom-designed software stack that turns EL&N's inbound cake enquiries into paid, kitchen-ready orders without manual email back-and-forth. It has four integrated components delivered as one service:

COMPONENT	ROLE
Ella voice agent	Answers the cake ordering line 24/7. Handles standard cake orders end to end. For custom cakes, sends the caller a link to the bespoke designer.
Bespoke cake designer web page	Custom-built visual designer where customers with specific requirements build and preview their cake step by step, then confirm and pay.
Stripe payment layer	Handles card capture and settlement. Card data never touches Click or EL&N systems; Stripe is the PCI-DSS Level 1 service of record. Payouts to EL&N every 2 to 3 days.
Click Pro order dashboard	Every completed order lands here with the cake image, spec, customer contact, and pickup or delivery details, ready for the kitchen. Single pane of glass for the operation.

SECTION 02

Stack and hosting

The system runs on established, enterprise-grade providers. No component is custom infrastructure; every provider below has published SOC 2, ISO 27001, or equivalent certifications.

LAYER	TECHNOLOGY / PROVIDER	PURPOSE	REGION
Voice AI	Vapi + ElevenLabs	Voice agent orchestration and text-to-speech	EU/UK [CONFIRM]
Telephony	Twilio	Inbound number, call routing, recording	EU/UK
Web application	Vercel	Bespoke cake designer + Click Pro dashboard hosting	EU/UK [CONFIRM]
Database	Supabase (Postgres)	Order records, tenant configuration, customer contact	EU/UK [CONFIRM]
Payments	Stripe	Card capture, settlement, payouts	UK

Messaging	WhatsApp Business API + SMS via Twilio	Order confirmations, status updates to customers	EU/UK
Automation	n8n (self-hosted)	Workflow orchestration between components	EU (Hostinger VPS)

[CONFIRM before meeting]: Regional hosting choices for Vapi, Vercel, and Supabase. All three support EU/UK regions; we will confirm the deployment region for the EL&N London tenant is EU/UK before go-live.

SECTION 03

Security and data protection

Q. Where is EL&N customer data stored?

Customer contact and order metadata are stored in Supabase (Postgres), with the EL&N London tenant configured to a UK or EU region. Payment card data is stored by Stripe only; it does not touch Click's systems or EL&N's.

Q. What encryption is in place?

TLS 1.2 or higher on all data in transit. AES-256 on all data at rest (Supabase default). Stripe handles PCI DSS Level 1 encryption for card data end to end.

Q. How is access controlled at Click?

Only named Click personnel have production access, gated by SSO and MFA. Access is scoped by role (support, engineering, admin). Every administrative action on the EL&N tenant is logged with timestamp and operator identity.

Q. Are you UK GDPR compliant?

Yes. Click AI Agency acts as Data Processor for EL&N under UK GDPR. We will sign a Data Processing Agreement (DPA) as part of contract execution. Our sub-processors (Vapi, ElevenLabs, Twilio, Vercel, Supabase, Stripe) all have published GDPR compliance and are on our sub-processor register available to EL&N on request.

Q. How long is customer data retained?

Order records: retained for 7 years for accounting purposes, then deleted. Call recordings: retained for 90 days for quality assurance, then deleted. Customer contact records: retained as long as the customer relationship is active; deleted on written request under GDPR right to erasure within 30 days.

Q. How do you handle a data breach?

24/7 monitoring on all production systems. In the event of a confirmed breach affecting EL&N data, we notify EL&N within 24 hours and the ICO within 72 hours per UK GDPR. Full incident report follows within 5 business days.

SECTION 04

Integrations and data flow

Q. What does the end-to-end flow look like for one order?

1. Customer calls the EL&N cake line. 2. Twilio routes the call to Vapi. 3. Vapi runs the Ella agent script; ElevenLabs produces her voice. 4. For standard orders: Ella captures order + contact and triggers a Stripe payment link via SMS/WhatsApp. For custom orders: Ella sends the designer page link. 5. On payment success, Stripe fires a webhook to our backend. 6. The order (with image and full spec) is written to Supabase and appears in Click Pro for the kitchen.

Q. Does anything integrate with EL&N's existing systems?

For go-live day 1, no direct integration with EL&N's internal systems is required. The system runs standalone. If EL&N later wants integration with an existing POS, accounting system, or CRM, we can scope that separately.

Q. Can the system export order data?

Yes. Click Pro provides CSV export of all orders for any date range. A read-only API endpoint can also be provisioned if EL&N's accounting or reporting team needs programmatic access.

SECTION 05**Availability, monitoring, and support**

Q. What uptime do you commit to?

99% target uptime on the Click Pro platform and voice agent, per calendar month, excluding scheduled maintenance windows notified in advance. Underlying provider SLAs (Vercel, Supabase, Stripe, Twilio) are all 99.9%+.

Q. How is the system monitored?

Continuous monitoring on all layers: uptime probes on Ella and the designer page every 60 seconds; error tracking on all backend jobs; call-quality metrics on every voice interaction. On-call rotation responds within 15 minutes to critical alerts, 24/7.

Q. What happens if a component goes down?

The stack is designed for graceful degradation. If Ella is unavailable, calls fall back to a recorded holding message and callback offer, so no order is silently lost. If Stripe is unavailable, the customer receives a retry link. If the designer page is unavailable, the caller is routed back to Ella for a phone-based order.

Q. How are updates deployed?

Changes to the EL&N tenant configuration (menu, pricing, opening hours) are deployed within 48 hours of a written request, up to 10 per month. Platform-level updates are deployed on a rolling schedule with zero downtime. Major platform changes are communicated to EL&N in advance.

Q. What support do we get?

A named dedicated account manager at Click AI Agency as the single point of contact, with same-business-day response. Emergency line for system-down issues, 24/7. Monthly service review meeting to walk through numbers, feedback, and any changes.

SECTION 06**Multi-branch deployment model**

Q. How does the system scale to EL&N's other branches?

Each branch runs as a separate tenant instance: its own phone number, its own Stripe account and currency, its own menu and pricing, its own hours and time zone, its own included minutes and monitoring. Because the London build is the foundation, each additional branch deploys in a fraction of the time London took.

Q. Is data isolated between branches?

Yes. Tenant data isolation at the database level. No branch can see another branch's orders, customer records, or configuration. Administrative access is scoped per tenant.

Q. Who owns the platform IP?

The Ella platform, the cake designer page design, and the underlying systems remain the property of Click AI Agency and are licensed to EL&N per site under the service agreement. EL&N owns all its own data (orders, customer records, ad accounts, brand assets).

SECTION 07**Data ownership and business continuity**

Q. What happens on termination?

Per the service agreement: all EL&N data (Click Pro records, customer contact database, voice agent call logs, advertising accounts) is exported and returned to EL&N within 14 days. Administrator access to any ad accounts registered under EL&N's name is handed over. Deletion from Click systems follows within a further 30 days.

Q. What if Click AI Agency goes out of business?

Contingency: (a) all EL&N-owned data (orders, customers, campaigns, ad accounts) is under EL&N's name where possible; (b) Stripe payouts continue directly to EL&N's bank regardless of Click's status; (c) EL&N holds admin credentials to its own Twilio number and can port it out; (d) source code and infrastructure documentation covering the EL&N tenant would be escrowed on request at contract execution.

SECTION 08

What EL&N IT will need to provide

- **Domain and DNS access.** A subdomain of EL&N (for example, cakes.elancafe.com) for the customer-facing designer page. We will provide the DNS records needed; EL&N IT applies them.
- **Business Stripe account.** Either an existing EL&N Stripe account for the London branch, or we can help EL&N create one. Bank details for payouts remain under EL&N's control at all times.
- **Menu and pricing input.** Current standard cake range with names, prices, images, and descriptions. Custom cake components (flavours, tiers, decorations, add-ons) with pricing rules.
- **Operating hours and lead times.** Cake ordering hours; earliest order lead time (for example, custom cakes 5 working days minimum); pickup or delivery slot rules.
- **Brand assets.** EL&N logo files, brand fonts and colours, image library for the designer page. High-resolution product photography preferred.
- **Kitchen point of contact.** One nominated Head of Pastry or duty manager per shift, to be trained on Click Pro during onboarding.

SECTION 09

Suggested meeting agenda

- System walkthrough and demo (15 mins) — Ella on a live call, the designer page in action, an order landing in Click Pro
- Security and compliance Q&A (15 mins) — anything not covered by this brief
- Integrations and data flow (10 mins) — where the boundaries sit between Click, Stripe, and EL&N systems
- Multi-branch scaling (10 mins) — what the rollout playbook looks like once London is proven
- What EL&N IT needs to action pre-go-live (10 mins) — DNS, Stripe account, brand assets
- Open questions and next steps (10 mins)

SECTION 10

Open items to close in the meeting

- Regional hosting confirmation across Vapi, Vercel, and Supabase for the EL&N London tenant (EU/UK)
- Domain and subdomain decision for the designer page
- Stripe account preference (existing EL&N account or new for this line)
- Any additional compliance certifications EL&N IT requires beyond UK GDPR and Stripe PCI DSS
- Preferred format and cadence for the monthly service report
- Confirmation that the 1 September go-live target still holds
